**RE: INSPECTION: PERMIT 330 -- LAKE FAYETTEVILLE – WASHINGTON CO.**

Dear Mr. Jurgens:

I performed my inspection of Lake Fayetteville Dam on the 16<sup>th</sup> of January 2015. As I have noted in the past, the hazard classification for this dam is “high” and the spillway will accommodate less than 50 percent of the PMF, according to the Phase I report issued by the Corp of Engineers and published in September of 1979. The last record we have on file of you executing a tabletop exercise of your emergency action plan (EAP) is the 21<sup>st</sup> of January 2004. It is my understanding that you have been working to update the EAP. Please finalize this work and take the steps necessary to exercise it.

Once again, I am pleased to report that I found no maintenance deficiencies. The vegetation was in a good state, the drains that you have installed in the toe appear to working as intended to manage the seepage, the crest showed no misalignment or deformation and the spillway was free from obstructions.

Thank you for your management of this resource.

My only request at this time is to notify this office when the EAP is updated.

Sincerely,

Ryan Brooks, E.I.T.  
Hydrologic Engineer
